Olist E-Commerce Sales & Performance Dashboard

Interactive Power BI project analyzing the Brazilian Olist e-commerce dataset

R$13.59M	98,666	R$138	92%
Total Revenue	Orders	Avg Order Value	On-Time Delivery

1. Project Overview

This project turns the public Olist Brazilian e-commerce data into a three-page Power BI report. It helps business users track revenue and orders over time, see which regions and product categories perform best, and understand customer payment behavior, satisfaction and delivery performance.

2. Dashboard Pages

- **Sales Overview:** KPI cards (Total Revenue, Order Count, Avg Order Value), month and year-wise revenue trend, state-wise revenue, and a Year slicer.
- **Product Performance:** category-wise revenue, category-wise order count (treemap), and a summary of Total Revenue, Order Count and Avg Review Score.
- **Customer & Delivery:** payment type breakdown, review score distribution, and on-time vs. late delivery status.

3. Key Insights

- Total revenue of **R$13.59M** from **98,666 orders**, with an average order value of about R$138.
- **São Paulo contributes about 38%** of revenue; the top 3 states (SP, RJ, MG) together account for about 63%.
- Revenue grew steadily through 2017 and peaked in **November 2017 (about R$1.01M)**, staying near R$1M per month in early 2018. The sharp drop at the end of 2018 reflects the dataset ending around August 2018.
- **Beauty & Health** leads in revenue (R$1.26M); **Bed, Bath & Table** leads in order volume (9,417 orders). Watches & Gifts ranks 2nd in revenue with fewer orders, suggesting higher value per order.
- **Credit card is 78%** of payment value, followed by boleto (18%) and voucher (2%).
- **92% of orders were delivered on time**; about 77% of reviews are 4 or 5 stars.

4. Tools & Skills

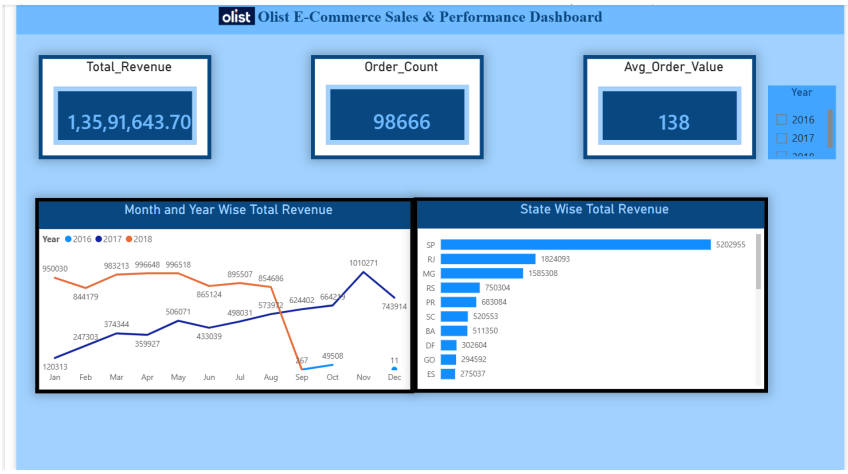

Power BI Desktop • DAX measures • Data modeling (related tables with a date dimension) • Data cleaning • Data visualization

5. Data Model & Measures

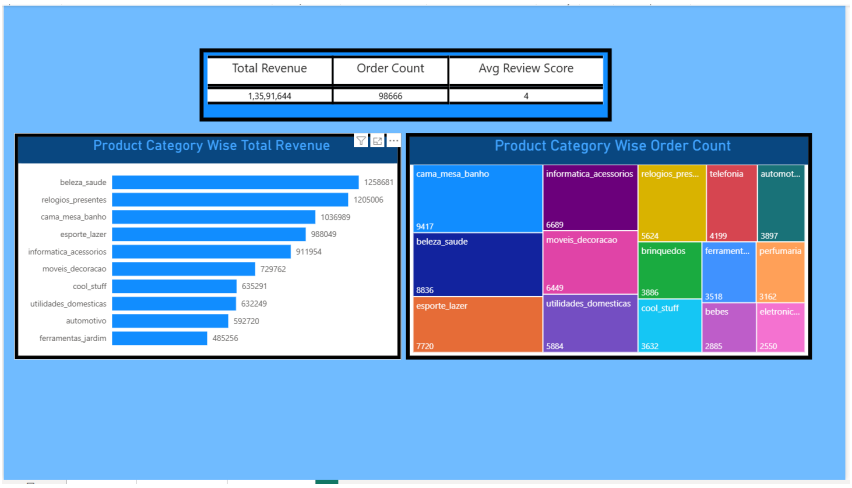

The model links the orders, customers, products, order items, payments, reviews and sellers tables, plus a *dim_date* table for time analysis. Main measures (in the *All_Measure* table): **Total Revenue**, **Order Count**, **Avg Order Value** and **Avg Review Score**. A calculated **Delivery Status** column labels each order as On Time or Late.

```

8. How to Use

- Download or clone this repository.
- Install **Power BI Desktop** (free, Windows).
- Open **Final_Powerbi_Project_olist.pbix**.
- If prompted about missing data sources, go to *Home* → *Transform data* → *Data source settings* and point each source to the matching CSV in the **data/** folder.
- Use the Year slicer and click chart elements to cross-filter.

9. Dataset

Brazilian E-Commerce Public Dataset by Olist (Kaggle). Revenue values are in Brazilian Reais (R$). The dataset is public and used here for learning and portfolio purposes.
